Hi,

My name is Philip and I graduated from National Taiwan University, master of science in Computer Science and Information Engineering. I found the position "Software Engineer & C++ Algorithm Developer/Programmer" in PTT. I believe that my keen sense of arithmetic can let me be a strong candidate for this position.

I passed an advanced 7 test for mental arithmetic when I was five years old. Both my bachelor and master degrees are computer science. This improved my logical thinking to solve problems. I participated in programming contests like ACM-ICPC and Google Code Jam and it made my programming skills better. Mahjong is another way to brainstorm. It is also important to my life and makes me make friends from all over the world.

Firmware engineer in VIVOTEK is my first job, I need to customize a lot of firmwares called "sample". These samples are often urgent to release. It pushes me to coordinate with my colleagues from different departments such as FAE, PM, QA, pre-sales. I would like to finish my tasks efficiently and make everyone feel comfortable. Because of my attention to detail, I often find and fix bugs my colleagues cannot track.

My resume and cover letter are enclosed for your reference. I hope that we can discuss my qualifications at some time convenient to you. You can reach me via email at this email address. Thanks for your time and consideration.

Sincerely,  
Cheng-Lung Peng

A handwritten signature in blue ink that reads "Cheng-Lung Peng".
